Resource group - A container that holds related resources for an Azure solution. The resource group can include all the resources for the solution, or only those resources that you want to manage as a group. You decide how you want to allocate resources to resource groups based on what makes the most sense for your organization. [Learn more](#)

Your first project

Foundry organizes development artifacts into projects— containers for managing permissions, monitoring, costs, and more. When you create a resource, a project is also created. This "default" project has more capabilities than projects that you create later. [Learn more.](#)

Default project name * proj-default

Content Review Policy

Foundry provides access to Azure OpenAI models. To detect and mitigate harmful use of the Azure OpenAI Service, Microsoft logs the content you send to the Completions and image generations APIs as well as the content it sends back. If content is flagged by the service's filters, it may be reviewed by a Microsoft full-time employee
